[Final Notes-](#) 12

Note: This is a very rough first draft so please be gentle with anything you have to say. I am very interested in any information on grades, names, access, other problems and other areas so if you can tell me anything then go for it. Also, I would like to stress that the grades in this guide are nothing more than a rough estimate which really needs your input. Have fun!

Bouldering is dangerous, don't be an idiot.

Getting There

When

Food

Bed

Rest Days

The Guide

The Topo

(Not to scale)

Boulder 1

Just to the left of where you walk into the boulders is where you can find boulder one and problems one through 4.

1 – V2

Start low and way left from the arête. Make a couple of big moves to the lip and traverse left to finish just left of the arête.

2 – V2

Start in between problem 1 and the arête on crimps. Climb straight up.

3 – V1

Stand start the arête. Climb up and left into the end of problems 1 and 2.

4 – V5

Sit start the arête and make a few hard moves to attain jugs. At this point, either go left into problem 3 or just straight up the face.

Boulder 2

Just to the right of boulder one, you will find boulder two.

5 – V1

Climb the arête on the far right of the left side of the boulder.

6 – V8

Sit start in underclings on left side of the left side. Fire up to a slopey hold then go right through a sidepull/undercling and throw to the lip.

7 – V5

Start as for number 6, but at the first slopey ledge, bump out left and go up the arête.

8 – V3

Stand start number 7 starting on decent holds on the arête and firing up to a sidepull.

9 – V2

Just right of a tree is a pit. Once you're in the pit, grab some holds at head height and throw up and left to sharp, dirty holds. Not recommended.

10 – V2

Start sitting just left of the tree. Traverse out left on good holds.

11 – V5

Start sitting about 6 feet left of the tree. Traverse out left on slopers and top out a few feet left of the arête.

12 – V3

Start just left of the arête. Go up.

13 – V6

Start on good holds in the middle of the face sitting down. Make big moves up to crimps and top out straight up.

14 – V4

Start as for number 13, but go left and top out at the edge of the boulder.

15 – V1

Sit start with left low and right high then gun up to the end of 14. One move wonder.

Boulder 3

Straight up from boulder one you will find a large boulder with a number of climbs on it.

16 – V0

The descent path.

17 – V2

Stand start to 18. Start with right on big sidepull and leftdown and left. Go up and right.

18 – V4

Sit start on two right facing holds. Pull up right and finish on 17.

19 – V7

Start as for 18. Make a couple moves up and left to jugs and then finish straight up.

20 – V5

Start as for 18. Make the couple moves up left to jugs and then continue out left to finish up and over the bulge.

21 –

Start low under the finish for 20 and 22 on bad holds. Fire up to a slot and finish up those problems.

22 – V6

Start way out left on good holds. Traverse right using trickery to finish up and over the bulge on 20.

23 – V4

Start as for 22. Go up and left and up using good holds and big moves.

Boulder 4

Right up the hill from the left side of boulder two is a overhanging face with a couple of problems.

24 – V1

Starting just left of the seam, traverse the lip of the boulder to end as for problem 25.

25 – V2

Start sitting down in the overhang on a big hold. Climb straight up.

Boulder 5

Right up the hill from the right side of boulder two is a climb on an overhanging arête.

26 – V2

Start just under the lip and go up. Campusy.

Boulder 6

Just up from the overhang on boulder 4 is boulder 6's problems 27 and 28. Boulder 4 is actually their landing.

27 –

Start on a juggy hold at about face height. Make a big reach out right followed by a huge crossover to the lip.

28 – V7

Start on the same hold as 27 and make a big move straight up to a right facing pinch. Top out straight up. Very height dependant.

29 –

Start with right on a pinch and left on a bad crimp. Slap up to the arête and go up.

30 –

Start just left of the arête and go up the arête.

31 –

Start as for 30, but go up and left to top out.

32 –

Start on the far right of the overhanging face. Top out directly.

33 –

Start as for 32. Traverse the lip left to finish as for 34.

34 –

Start low in the overhang and go straight up and out.

35 –

Start around the corner to the left of 34 on the arête and finish up 34.

Boulder 7

Straight up the hill from boulder 3 is this nice face with a few climbs on it.

36 – V2

Start on crimps and make a few moves out to the arête. Traverse back left using the arête to finish on top. V0 if you use the big broken off flake for your feet.

37 – V2

Start in the middle of the face on crimps and go straight up.

38 – V1

Start on the left side of the face and make big moves to good holds.

Boulder 8

Going left from boulder 7, there is a small scooped boulder with a couple of problems.

39 –

Start in the scoop and go right to top out.

40 –

Start in the scoop and go out left to top out.

Boulder 9

Following the path from boulder 3, this boulder is down from boulder 8.

41 –

Climb the right side of the face.

42 – VB

Climb the left side of the face.

‘Boulder’ 10

Uphill from boulders 9 and 8 is a large face coming out of the hill. Climb it.

43 –

Highball the left side of the right facing face.

44 –

Start just left of the corner and climb up and out.

45 –

Start far left from 44 right before the end of the ‘boulder.’ Make a couple of moves and then traverse right to end on 44.

Boulder 11

Uphill from the overhanging face of boulder 6 is this small boulder with its lone problem.

46 –

Climb the face.

Boulder 12

Going right from boulder 6 is boulder 12.

47 –

Start low on the right side of the bulge and go up.

48 –

Start as for 47, but traverse on underclings into 49 and finish as for that problem.

49 –

Start on a big undercling at face level. Slap up and top out.

50 –

Out left from problem 49 is a crack. Start on this and go up and right to top out.

51 – VB

Climb up the face. This would make a decent descent.

52 –

Start on a good hold and fire up.

53 –

Climb up the overhanging dihedral feature

Boulder 13

Straight up from boulder 12 is boulder 13.

54 –

Start on a big jug sidepull and go up the high, intimidating face.

55 –

Start as for 54, but go right and finish as for 56.

56 –

Climb up the dihedral feature.

57 –

Start low in the overhanging face and go straight up.

58 –

Start as for 57, but when able, traverse right towards the arête.

59 –

Climb the arête on the far right of the overhang.

‘Boulder’ 14

Under the overhang on boulder 13 is a face that is part of the hill.

60 –

Climb the face.

61 –

Around the corner from 60 is a hole. Climb out of this hole.

Boulder 15

To the right of boulder 13 is yet another boulder.

62 –

Climb the downward facing arête.

63 –

Sit start the upward facing arête and climb it.

64 –

Same start as for 63, but go up and left.

‘Boulder’ 16

Out right from boulder 15 is a large overhanging face which is part of the hill. I’m sure there are a tonne of problems here, but I haven’t done any of them.

Final Notes

Coming in the update will be more grades, pics of the problems and (hopefully) some names for the various problems and projects. Again, email all info you may have to rock_climbr@hotmail.com and I’ll see what I can do.

Have fun,

Scott
